

Lab Assignment 3

30/01/2026

Total Marks: 24

-
- Write the query, execute and paste screenshots, and make a pdf. Paste the text of the query too. You need to show a screenshot to demonstrate the correctness of your query. If you have made some changes that are not visible in the direct output, display the whole table again.
 - Submit one file .pdf file containing all answers and the file name should be **<roll no>_<name>_assignment3.pdf**
 - Write the questions before the answers.
 - Write a small justification for your solution.
 - Complete the exercise before 4.45 PM and submit the pdf in Moodle.
 - You can use PGAdmin for this lab
-

1)

A. Find all customer_ids who made a payment in February, 2007 OR paid more than \$10, but exclude customers who satisfy both conditions

(2)

B. Now return the name and email address of all the customers who satisfy the above conditions.(Do not use Joins)

(1.5)

2) Find the average, maximum, and minimum payment amount per customer, but only for customers whose maximum payment exceeds the average payment of all the customers together.

(2)

3) Identify customers who have made at least 40 rentals and whose average rental duration is greater than 5 days.

(3)

4) List films whose rental rate is higher than the average rental rate of all films and whose replacement cost is below the average replacement cost of all films. **(2)**

5) Find customers whose total payment amount is greater than the total payment of customer with customer_id = 1. **(2)**

6) Categorize films into price bands:

- Cheap → rental_rate < 1
- Standard → 1–3
- Premium → > 3

Return each band and the number of films in it. **(2)**

7) Determine which day of the week has the highest number of rentals. Return the day name and total rentals. **(3)**

8) Group all films by category and return each category and the count of films belonging to that category. **(1.5)**

9) For each customer, calculate the percentage of their payments that are greater than \$5, and display it as text with a % sign. **(3)**

10) Find customers who made at least 5 payments, and where one single payment accounts for more than 15% of their total payment amount. **(2)**

Extra Questions:

- 11) Find customers who rented a film but never made a payment.
- 12) Identify rental dates on which more than 500 rentals occurred. Return the date and total rentals for that date.
- 13) Find customers who have rented the same film more than once. Return customer_id, film_id and the number of times it was rented.
- 14) Group all films by category and return the category with the second highest count of films.
